services are key activities in a globalized economy and they also underlie the quality of life of local residents the advanced work presented in this book was selected from the proceedings of the third international conference on serviceology icserv2015 held July 7-9, 2015 in San Jose, CA, USA. The conference was supported by the Society for Serviceology. The society was established in 2012 in Japan to explore the scientific systematization of services and to promote technological developments for solutions to industrial issues. This book provides a useful general guide to the state of the art in the theory and practice of services. It can also serve as a valuable reference book for researchers in a wide range of fields from engineering to marketing and economics.

details the design and process of water supply systems tracing the progression from source to sink organized and logical flow tracing the connections in the water supply system from the water source to its eventual use emphasized coverage of water supply infrastructure and the design of water treatment processes inclusion of fundamentals and practical examples so as to connect theory with the realities of design provision of useful reference for practicing engineers who require a more in-depth coverage higher level students studying drinking water systems as well as students in preparation for the FEPE examinations inclusion of examples and homework questions in both SI and US units

we are pleased to present the revised edition of the series foundation mathematics for primary classes books 1-5. This series is based on the latest curriculum prepared and recommended by the Council for the Indian School Certificate Examinations, New Delhi. The new curriculum for classes 1 to 5 is designed to ensure that children build a solid foundation in mathematics by connecting and applying mathematical concepts in a variety of ways. This curriculum aims to develop a number of mathematical skills and processes among children. Main objectives of teaching and learning mathematics at primary level are to develop the mathematical thinking and problem-solving skills and apply these to formulate and solve problems, acquire the necessary mathematical concepts and skills for everyday life and for continuous learning in mathematics and related disciplines, develop the necessary process skills for the acquisition and application of mathematical concepts, create love and interest towards mathematics, make effective use of a variety of mathematical tools in the learning and application of mathematics, reason logically, communicate mathematically and learn cooperatively and independently. The present series has been developed and designed

keeping the above objectives in mind this child friendly series teaches mathematics in such an interesting and comprehensive manner that even an average child has no difficulty in grasping the fundamental concepts of mathematics the salient features of this series are a graded and spiralling approach keeping in mind the age and level of understanding of the student eye catching illustrations and child friendly layout to kindle the imagination of the child and create an interest in the subject each chapter begins with the heading let us recall which refreshes the concepts learnt in the previous class the fact box remember highlights the important points concept detailing helps in conceptual understanding that refers to grasp of ideas interactive exercises help in kids participation this level of engagement makes it easier for kids to retain information value based questions are meant to inculcate moral values in the children review exercise at the end of each chapter checks the retention capacity and the level of understanding of the students assignments under the heading mental maths not only enhance the mathematical and calculation skills of the students but also fortify the concepts already learned let's play introduces games that improves critical thinking problem solving interaction and collaboration with peers maths lab activities are meant to learn mathematical concepts through various activities two model test papers one for half yearly examination and other for annual examination have also been added in each book it is hoped that the series will meet the requirements of the students teachers and parents alike suggestions and constructive criticism for the improvement of the books would be highly appreciated the publishers

this massively updated and expanded fifth edition is the most complete authoritative engineering treatment of the dehydration and gas purification processes used in industry today of great value to design and operations engineers it gives practical process and equipment design descriptions basic data plant performance results and other detailed information on gas purification processes and hardware this latest edition incorporates all significant advances in the field since 1985 you will find major new chapters on the rapidly expanding technologies of nitrogen oxide control with discussions of regulatory requirements and available processes absorption in physical solvents covering single component and mixed solvent systems and membrane permeation with emphasis on the gas purification applications of membrane units in addition new sections cover areas of strong current interest particularly liquid hydrocarbon treating claus plant tail gas treating thermal oxidation of volatile organic compounds and sulfur scavenging processes this volume brings you expanded coverage of alkanolamines for hydrogen sulfide and carbon dioxide removal the removal and use of ammonia in gas purification the use of alkaline salt

solutions for acid gas removal and the use of water to absorb gas impurities the basic technologies and all significant advances in the following areas are thoroughly described sulfur dioxide removal and recovery processes processes for converting hydrogen sulfide to sulfur liquid phase oxidation processes for hydrogen sulfide removal the absorption of water vapor by dehydrating solutions gas dehydration and purification by adsorption and the catalytic and thermal conversion of gas impurities
